## New discovery for Minera IRL

MINERA IRL Ltd's diamond-drilling programme at the Ollachea gold property in Peru has confirmed the company view of a "substantial new gold discovery".

The latest results include 160m downhole at 4.39g/t Au, 42m at

1.32g/t Au, 54m at 4.14g/t Au and 80m at 2.22g/t Au. The company estimated true widths at about 90% of intersected widths.

Gold mineralisation occurs within sheeted quartz-sulphide veins and veinlets within sheared slates.
